

Polyco Healthline Ltd is committed to supply its products and services in a responsible manner, helping to ensure that the impact on the local and the wider environment is minimal.

As part of this plan, Polyco Healthline Ltd aim to reduce the energy usage at the Bourne site and through the sub-contractors the company employs.

Polyco Healthline Ltd is committed to:

- Increasing our energy efficiency
- Investing in energy efficient technologies
- To maintain our certification to ISO 50001
- Ensuring compliance with ESOS and any legal or other requirements
- Achieving our energy objectives and targets
- Supporting the purchase of energy efficient products and services.

Through this commitment the environmental impact of the business operation will be reduced, and the energy efficiency increased. To meet these aims, the company will instigate a programme of continuous improvement for energy consumption, this programme includes the following:

- Regularly surveying the main energy consuming parts of the company, vehicles, equipment in the warehouse, manufacturing activities and warehouse utilities.
- Identify methods for energy usage reduction through better process, improved 'housekeeping' methods, record keeping and energy progression.
- Energy usage KPI reports and review of performance, targets and objectives at management review.

This policy shall be implemented by the Head of logistics and warehouse manager and promoted by the Environmental management system (EMS) Implementation team.

The EMS Implementation Team shall also be responsible for promoting and communicating energy efficiency to all staff and disseminating information about new programmes and initiatives.
